

Turn paper into trusted business data, automatically.

IDP Platform reads your Arabic and English documents, recognises what each one is, extracts the information your teams need, and delivers it into your business processes. It runs on your own servers, so your documents never leave your organisation.

THE CHALLENGE

Manual data entry

Staff retype names, dates, amounts and references from every document.

Costly mistakes

Keying errors reach your records and surface later as rework and risk.

Archives no one can search

Scanned files hold valuable information that is hard to find and reuse.

HOW IT WORKS

WHAT IT DOES

Capture from anywhere Web upload, e-mail inboxes, watched network folders and a REST API, each with its own intake rules.	Arabic & English OCR Turns scans and photos into searchable PDFs and full text, with Arabic kept in correct reading order.	AI classification & extraction Recognises each document type and reads the fields you define, such as dates, amounts, names and references. It can also write summaries.
Confidence you can see Every value carries a confidence score. Uncertain documents go to a reviewer, and the rest flow straight through.	Guided human review Reviewers see each value highlighted on the page, correct it with a click, and work from routed review queues.	Configured, not coded Business administrators define document types, fields, AI instructions, queues and roles in a web console.

BUSINESS VALUE

- **Faster turnaround:** documents reach your systems without waiting in a data-entry queue.
- **Less manual work:** teams focus on exceptions, not data entry.
- **Higher data quality:** a human check where it matters, automation everywhere else.
- **Every document findable:** indexed and fully text-searchable.
- **Full visibility:** live dashboards for volumes, backlog and processing times.

ENTERPRISE READY

- **Data stays in-house:** deployed on-premise, inside your network.
- **No special hardware:** runs on standard CPU servers, with no GPU required.
- **Your choice of AI:** a built-in local model, or your approved AI service.
- **Secure and governed:** Active Directory sign-in, role-based access and a full audit trail.
- **Fits your landscape:** searchable PDF, text and CSV outputs, delivered by e-mail or to folders. Export connectors for OpenText Content Management, IBM FileNet, MS SharePoint, Alfresco, and more.

IDEAL FOR Invoices & finance · Contracts & legal · HR files · Correspondence & archives
